“Macro-economic impacts of US LNG exports”

Featuring

Kenneth B. Medlock III, Ph.D
James A. Baker, III and Susan G. Baker Fellow in Energy and Resource Economics, Baker Institute

The dramatic growth in shale gas production in the US has presented a number of opportunities and challenges for the US economy. To begin, shale gas production has lowered the domestic price of natural gas so the US now has among the lowest prices in the world and shifted the US from emerging as a significant importer to a pending exporter of LNG. This has benefitted consumers and led to gains in competitiveness for US manufacturers. Low natural gas prices in the US negatively impact the profitability of domestic upstream activities, which has been a primary driver of interest in exporting LNG as suppliers seek new demands in higher-priced markets. While selling natural gas at higher prices on the world market would increase profits for US gas producers, the price gap between the US and the rest of the world will shrink, thereby eroding some of the benefits that have accrued to US consumers and manufacturers. The net balance of the gains and losses associated with trade are at the core of the analysis.

TIME
11:15 am - 1:00 pm

LOCATION & PARKING
Grand Hall
Rice University Ley Student Center
Parking details at www.forum.rice.edu

FEE
$25 per person for online registration
$35 per person for on-site registration
includes boxed lunch

REGISTRATION
www.forum.rice.edu

NEXT ROUNDTABLE
May 20, 2016

PROFESSIONAL DEVELOPMENT HOUR (PDH)
These Roundtables qualify for one (1) PDH each. Your email confirmation at completion of registration serves as your PDH and payment receipts. Paper receipts may be picked up at the registration desk at time of check-in.
